Project Title: Spicy Stock and Distribution Management System

Brief Description:

The **Spicy Stock and Distribution Management System** is a web application designed to help small and medium-scale businesses manage their inventory, stock levels, and product distribution efficiently. The system enables administrators to add, update, and remove products, track inventory movements.

The platform ensures real-time updates of stock levels, reducing the risk of shortages or overstocking, while providing transparency in product distribution and sales tracking. This will help businesses streamline operations, improve customer satisfaction, and maintain better control over their supply chain.

Technology usage (Eg: NodeJS, ReactJS):

Frontend: ReactJS, vite

Backend: Node.js, Express.js

Database: MongoDB
